POTTI-CLEAN

PRODUCT BULLETIN

POTTI-CLEAN is a uniquely formulated, bacterial/enzymatic urinal screens & tablets which are individually wrapped for use in the base of urinals for a slow dissolving bio-enzymatic bowl cleaner and septic treatment.

Appearance.....	Colored Tablets With Screens
Weight.....	100 Grams/Tablet
Odor.....	Fresh Scent
pH.....	Neutral
Effective pH range.....	6-12
Effective Temperature Range.....	30-150F
Shelf Life.....	5 Years/U.O.C.
Product Life.....	40-60 Days
Packaging.....	12 Screens/12 Blocks/Case

The bacterial strains present in the potti-clean are capable of degrading uric acid, which is the leading cause of odors in a urinal system. The product provides initial odor control by the use of pleasant fragrances, as well as the elimination of odors at the source.

Potti-Clean also provides a beneficial drain line treatment. Uric acid dries to a crystalline structure, which has the ability to slow the drain system. As the bacteria are released from the potti-clean they provide a continuous drain treatment, reducing uric acid as well as a host of organic build-up problems.

In septic systems, the beneficial bacteria found in potti-clean will provide a septic treatment. This will allow for the liquification of organic waste and control of odors.

As a result of the action with **Potti-Clean**, there is the elimination of odors and an easy to use maintenance system for many different and similar product applications.
